

McAfee Email Protection and Continuity

Email protection, availability and compliance for a product business

Tackle email security the easy way with McAfee® Email Protection and Continuity from CenturyLink. Beyond blocking spam, phishing scams, malware, and inappropriate email content before it reaches your network, this cloud-based service enforces outgoing mail policies to protect you from data loss. And you can count on always-on email continuity that your organization will have around-the-clock access to email. With no hardware to buy, no software to install, and automatically updated to protect against the latest threats, you can focus on securing your business, not running applications.

Email is today's engine of productivity, with thousands of messages flowing through the typical company's email servers every day. Managing email to ensure security and connectivity has become a huge task that continuously diverts IT resources from strategic work that advances business goals.

Low-Cost, Easy-to-Manage Email Protection

A snap to deploy, McAfee Email Protection and Continuity prevents inbound and outbound email threats from impacting your business and end users, with continuous access to email, no matter what. This security Software-as-a-Service (SaaS) is always on, is always up to date and requires no additional investment in time and resources to maintain it. Because the service stops spam and email-based threats before they infiltrate your network, load is reduced if you have premise based services and everyone benefits from less spam occupying valuable bandwidth and storage space. And world-class 24/7 Customer Support ensures that help is never more than a phone call away.

Simplified web-based administration and reporting

With an intuitive web-based management console, best practices come built in, and email policy updates are simple to manage across all your domains and locations, freeing up IT resources and lowering your total cost of ownership. Administrators can configure and enforce policies, including content-filtering and attachment content rules. Policies may be applied globally to user groups or individuals for ultimate flexibility, and extensive reports, logs, and quarantines provide ultimate visibility.

Protect Email
and Email Access—
the Simple Way

Key email protection features of McAfee Email Protection and Continuity include:

- Perimeter IP filtering to block threats before they reach your network
- Advanced spam and fraud protection
- Layered virus and worm scanning to block 100 percent of all known viruses
- Email attack protection
- Filtering and policy enforcement for outbound messages and attachments
- Complete message continuity for no email downtime
- Group policies management
- Message audit message tracking and disposition tool
- Optional McAfee Email Encryption

Robust Infrastructure You Can Rely On

Our SaaS data center strategy includes maintaining multiple data centers across four continents. Each data center is ISO 27001 certified and provides full redundancy with active-active redundant hardware at all network layers: firewall, router, and load-balancer switch. Within each data center, we also provide automated network and application monitoring, which provides remote operations personnel visibility into suspect or trouble alerts and alarm and 24/7 security experts vigilantly overseeing the systems.

Fierce Email Security Superior Spam Protection

Our Stacked Classification Framework® spam detection system, powered by a patented technology, applies multiple layers of analysis to determine the probability that an email is spam, regardless of language. Because each filtering technology has unique strengths designed to identify specific threats, including image-based spam, the combination creates one of the most accurate and comprehensive filtering processes in the industry.

McAfee Global Threat Intelligence™ message reputation inspects each message to detect known and emerging message-based threats such as spam, even if these messages come from a reputable source, such as an infected system within a whitelisted company. The score is based not only on the collective intelligence from sensors querying the McAfee cloud and the analysis performed by McAfee Labs™ researchers and automated tools, but also on the correlation of cross-vector intelligence from file, web, and network threat data to lock or quarantine email more efficiently and accurately for maximized performance.

Count on multilayered scanning to effectively block viruses and worms

McAfee Email Protection and Continuity includes our proprietary WormTraq® detection technology. It also scans for malware, in both the message body and all attachments, using our industry-leading, signature-based anti-virus engine powered by McAfee Global Threat Intelligence. Just as important as blocking inbound attacks, outbound emails are filtered to protect your clients against malware.

Complete scalability to protect from massive-scale email attacks

Our complete solution shields premise-based email servers and networks and critical messaging gateways from email attack, instantly blocking denial-of-service and other SMTP-based attacks, including directory harvest attacks, email bombs, and channel flooding.

Built-in transport layer security (TLS) encryption for secure organization-to-organization communication

For organizations that need a higher level of security for inbound and outbound email, our TLS protocol accepts and filters encrypted inbound and outbound messages and delivers them across a secure tunnel.

Always-on email continuity—no matter what

Business doesn't stop when your email premise based network experiences an outage. Whether the network is inaccessible due to natural disasters, power outages, or even regular maintenance, McAfee Email Protection and Continuity keeps employees, customers, partners, and suppliers connected 24/7. The secure, easy-to-use web interface allows users to send and receive messages with continued protection, search for and retrieve stored messages, and manage quarantines and message stores just as you would in your normal live environment. The service retains all messages sent or received during the outage, intelligently synchronizing an accurate record of all outage-period message activity when your own email servers come back online.

Affordable, manageable email security and continuity

- No hardware or software to buy, maintain, manage, or update
- No upfront capital outlay
- No setup or upgrade fees
- Automatic continuity activation and synchronization for seamless continuity
- Simple web-based administration
- 24/7 customer support at no extra charge
- ISO 27001 certified

Seamless email continuity to protect your business reputation, operations, and productivity

- Automatic service engagement when an outage is detected
- Access to email received during an outage via a secure web interface
- Full email functionality, including read, compose, reply, forward, and delete
- Intelligent post-outage email activity synchronization
- Outage notifications and system updates
- Inbound and outbound message filtering
