

Microsoft SharePoint 2010

Hosted SharePoint 2010 from CenturyLink is the business collaboration platform that enables you to connect and empower your employees through formal and informal business communities, within the business and beyond, and to manage content effectively.

The consolidation of collaboration solutions onto SharePoint 2010 makes it possible to cut costs through more efficient training, increased IT productivity and cost-effective maintenance, all within a governable and compliant platform.

These integrated capabilities are enhanced by Search technologies and make it possible to rapidly respond to business needs based on data-driven business insight and faster solutions development and deployment.

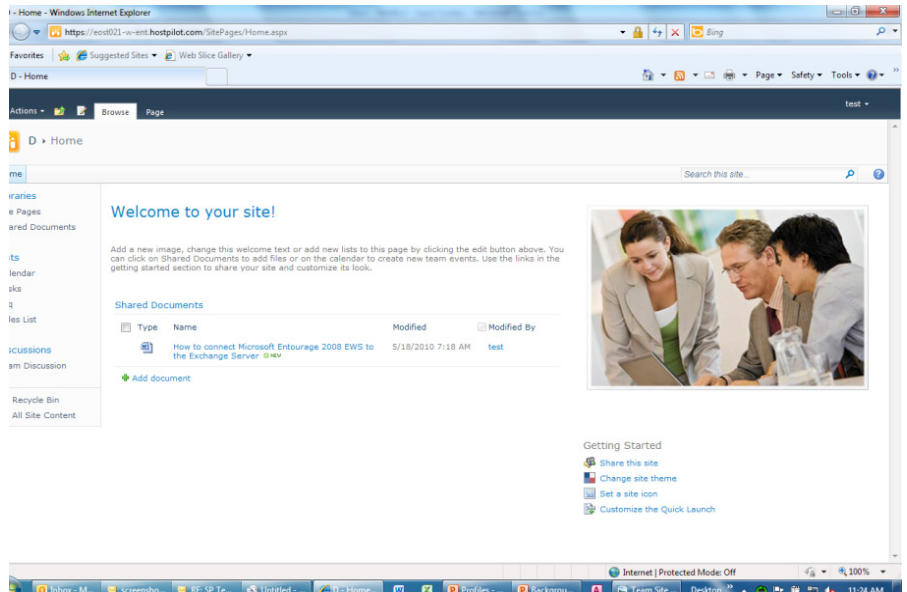

Connect and Empower People

Making people more productive is a direct result of enabling them to access resources and knowledge regardless of where they are or how they connect (laptop, tablet, smartphone). SharePoint provides users with a streamlined user experience, increasing use and adoption.

Faster adoption with the new user interface

SharePoint now looks and feels more like other familiar Microsoft products, making it easier and more intuitive to use, driving productivity even further. This user experience is enhanced by additional technologies that boost usability and by the ability of all users to easily edit and publish SharePoint sites.

Improved collaboration with Office 2010

Microsoft Office is, by far, the most commonly used business-productivity software in the world. Office has always been about automating tasks and providing people with choices in how they get things done. SharePoint helps take that to the next level.

Continued productivity regardless of location

Mobile work isn't just for the salesforce anymore. Today, most businesses support telecommuting and they expect employees to be "always on, always connected," even when they are away from the office. SharePoint 2010 offers a diverse set of capabilities that extends people's access to resources and allows them to be productive regardless of the tools or devices they have available.

Cut Costs with a Unified Infrastructure

Driving cost efficiencies and accomplishing more with the same resources is made possible through the consolidation of business productivity solutions onto SharePoint 2010. The ability to deploy any of the integrated capabilities and the new enterprise-class management tools to Intranet, Extranet and Internet sites, paves the way to optimizing IT resources and significantly lowering the TCO of business-productivity solutions.

Reduced costs through platform consolidation

The rich set of integrated capabilities for business collaboration provided by SharePoint 2010, in addition to its enterprise-scale manageability, will enable more and more customers to retire niche solutions and focus their solutions on SharePoint. This will accelerate their ability to drive efficiencies, allowing IT departments to achieve more impact with the same resources.

Maximize Your Team's Potential

With business collaboration and productivity becoming instrumental to business success, employees are required to work in teams, not silos. With SharePoint 2010, your teams can have their own pages, drive innovation through surveys and feedback tools and virtually eliminate version control issues when multiple users update a single shared document.

Customize Your SharePoint

You can easily customize team pages with no need for programming. Create surveys and collect feedback to foster quicker decision making and innovation. Those that have been assigned administrator rights can customize user access and authority, create libraries and folders to organize stored documents, and adjust document retention and edit rules.
